

July 2007

To Our Water Customers:

This is a Consumer Confidence Report, that New Hampshire Environmental Services (NHDES) requires us to send in July of every year. On the back side of this letter, please find a report of Bristol's water quality. We have enclosed some interesting facts about water.

NHDES has prepared a Source Assessment Report for the sources serving this public water system. The results of the assessments are as follows. For Fowler River well, **2** susceptibility factors were rated high, **0** rated medium, and **10** were rated low. For Danforth Brook (Storm Center) **1** susceptibility factor was rated high, **1** rated medium and **10** rated low. The complete Assessment Report is available for inspection at the Public Works Department Office. For more information, call Jeff Chartier or Juanita Gilman or visit the Town of Bristol website at www.townofbristolnh.org or NHDE's Drinking Water Source Assessment Program website at www.des.state.nh.us/dwssp.

Just to recap on previous reports, our system serves over 1320 service connections. In the year 2006 the department pumped through its distribution system 121,380,000 gallons of water this was consumed by customers, fire protection and water main breaks. There is a million gallon storage tank on North Main Street; this enables us to provide fire protection through 158 fire hydrants as well as serve the distribution system.

We hope this report is beneficial to you, in understanding our Water System.

The department has hired an engineering firm to do a comprehensive study of the water system for future growth projected for the next 25 years.

Any questions or comments please call our office at 744-8411.
